

Frontend Assignment - Build a Landing Page

Project

PDF Annotation Tool

Role

React Intern

Objective

Create a clean and responsive landing page for a browser-based PDF Annotation Tool. The page should clearly communicate the purpose of the tool and encourage users to try it.

Tech Requirements

- Use Next.js with the App Router
- Use Tailwind CSS for styling
- Use JavaScript only (no TypeScript)
- Build only the landing page (path: /)

Tasks

1. Build the Landing Page (path: /) using reusable components.

2. Sections to Include:

a. Hero Section:

- Headline and subheading
- Button linking to /editor (can be a placeholder)

b. Features Section:

- 3 to 4 core features
- Layout and style are up to you

c. Call to Action:

- Prompt users to upload PDF or start
- Include a button or non-functional file input

d. Footer:

- Project name
- Placeholder for GitHub link
- Copyright

Evaluation Criteria

- Structure: Use of App Router and organized components
- Responsiveness: Mobile and desktop layout

Frontend Assignment - Build a Landing Page

- Tailwind Usage: Semantic utility class usage
- UI Quality: Layout, spacing, and clarity
- Code Quality: Clean, reusable components with proper naming

Submission Guidelines

- Submit GitHub repository or ZIP file
- Include a short README with setup instructions
- /editor route does not need to be functional
- App should render correctly at / (homepage)
